

**i** You must turn off your light before removing your old bulb and fitting a new one.

## Changing a light bulb

### How to change a light bulb

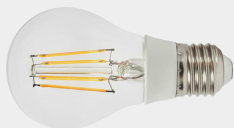

Allow the bulb to cool down. If you have had your light on, and the bulb has suddenly popped, you will need to wait several minutes for it to cool down.

If your light is high up, use a ladder, using chairs or tables could be unsafe.

Take out the old bulb.

**Bayonet fitting light bulb**, hold the bulb gently, but firmly. Push with light force and turn anticlockwise until the bulb becomes free.

**Screw fitting light bulb** twist the bulb gently in an anticlockwise direction until loose.

Insert a replacement bulb and in the same way that you removed the old bulb, now turn it clockwise, to fit the new bulb in place.

Your bulb is securely fastened once it clicks into place.
