

Unblocking toilets, internal drains, or waste pipes

You will need

plunger

chemical drain cleaning product

cleaning gloves

cloth

Overflow

Step 1

If your sink is completely blocked place a plunger over the plug-hole. Stuff a damp cloth into the overflow.

Pump the plunger up and down.

Take the plunger away and see if the water now drains. You may need to do this a couple of times.

Step 2

Try using a chemical drain cleaning product.

Wear protective gloves, and make sure you follow the instructions carefully as the cleaner is very toxic
